The Agile Insights Software
Design the future simply agile.

quantilope has a product which turns the market research industry upside down. An automated self-service platform based on newest technologies delivers professional consumer insights fast as lightning. With the help of this solution, we have already delighted various great brands. Together with established investors, we are ready for the next step and are searching for motivated and excellent recruits who want to become part of our success story. Right now we are looking for a

Backend Engineer (m/f/x)

As a Backend Engineer (m/f/x), you will be working with amazing technologies in a growing team.
As an expert on web backend technologies, you have the mission to maintain and design our architecture to ensure our systems scale and meet our customer's needs.

YOUR CHALLENGE

- You'll be developing the quantilope market research platform together with a highly agile team.
- You'll drive the design of a Microservices architecture, ensuring it meets high-quality standards.
- You'll design well documented and performant internal and external APIs.
- You'll act quickly and decisively upon changing environments, optimize workflows and share your knowledge with your team.
- Together with the team, you will be involved in the complete product development life cycle, from conception to live operability.

YOUR PROFILE

- Successful professional experiences with NodeJS during the last three years.
- Experience with design patterns, clean code is one of your passions
- Experience in developing public, secure and performant RESTful APIs.
- Experience in developing distributed systems in Microservices architecture.
- Experience in integrating external APIs into existing applications.
- Experience in working with different storage solutions, from databased (SQL and NoSQL) to message brokers and logs (RabbitMQ, Kafka).
- Knowledge and experience in software testing (unit, integration and end-to-end tests.)
- Good knowledge of Git.
